## Core Skills

Front-end Architecture, Design Systems, Monorepo Architecture, Performance Optimization, AI Agent Development, LLM Integration, AI-Powered Developer Tools, Developer Experience, PWAs

UI/UX Design, Responsive Design, Typography & Layout, Accessibility (WCAG), SEO, Color Theory, Visual Hierarchy, Interaction Design, Design Tokens, Motion & Animation

## Working With

TypeScript, React, Next.js, Node, Web Components, Figma, Vite, Webpack, Jest, Vitest, RTL, Playwright, Cypress, Biome, Storybook/Chromatic, GHA, DataDog, Sentry

Docker, Go, Python, Remix, Astro, React Native, Redux, Adobe Creative Cloud, OpenAI API, Claude API, Electron, CI/CD, Telemetry/Observability, Event Schemas, S3/CDN

## Work Experience

### Docker

#### Senior Software Engineer

Led engineering across AI platform + Docker Desktop enterprise admin; shipped production systems adopted internally and by enterprise customers.

Rebuilt internal Electron UI platform (monorepo, CI/CD, design system, hot reload, test infra) and delivered telemetry pipelines (schemas, CI validation, dashboards).

Hardened open-source GitHub automation (secret leak prevention, contributor auth, prompt-injection mitigations) and built org-wide reusable runners.

Took over ownership and shipped Bulk Deployment; delivered Hub catalog integration and enterprise Insights dashboard front-end architecture.

### Cadre

#### Lead Engineer

Unified decoupled SPA and third-party marketing site into cohesive Django/React app; migrated front-end to monorepo.

Built custom server-rendering with Webpack, React, and Node.js for marketing site.

Led internal design system built on Base Web component library (open-source contributor).

Mentored full-stack engineers using Agile and Shape Up methodologies.

### Patreon

#### Senior Front-End Platform Engineer

Led migration from Flask/React multi-page app to Next.js, achieving a 55% reduction in LCP through incremental rollout with feature flags.

Built observability stack integrating DataDog, Sentry, PagerDuty, and Slack; migrated testing from Enzyme to React Testing Library and Cypress.

Drove TypeScript adoption, linting standards, and front-end best practices; contributed to component library and Redux-to-Jotai migration.

Mentored engineers and created “Front-End 101” onboarding track for new hires

### Transfix

#### Staff Front-End/Mobile Engineer

First front-end engineer; established web and mobile architecture, rebuilding Android/iOS apps in React Native.

Evolved web stack from Rails → Aurelia → React/Redux; developed internal library for web, mobile, and shared NPM modules.

Implemented CI/CD with CircleCI, defined linting/testing standards, and led creation of internal component library.

Rebuilt public site from WordPress to Jade templates, later migrating to 11ty.js.
